## **Ortoma agrees on term sheet for development and distribution of customized version of OTS Hip**

**Ortoma AB (publ) ("Ortoma" or the "Company") has agreed on a non-binding term sheet with the DePuy Synthes family of companies ("DePuy Synthes") for the development and distribution of a customized version of the Ortoma Treatment Solution for hip surgery, OTS Hip. The next step in the process is to sign a binding definitive agreement.**

With the term sheet, the parties have a preliminary understanding of the principal commercial terms for the worldwide distribution rights (excluding Japan) of the customized version of the Ortoma Treatment Solution (Custom OTS) for hip replacement surgery subject to regulatory approvals. The term sheet covers Ortoma's development efforts and DePuy Synthes' distribution rights for the Custom OTS over an initial term of 7 years. Subject to a definitive agreement, the potential income for Ortoma may be a combination of development fees, fixed fees and on-going variable fees but cannot be quantified at this stage.

### **Linus Byström, CEO of Ortoma, comments:**

*"Ortoma is very happy to have agreed on this term sheet as it is an important step for Ortoma in developing and broadening its collaboration with DePuy Synthes. The parties will now work on negotiating a definitive agreement that will allow for worldwide distribution rights outside Japan for the customized version of OTS Hip."*

**About Ortoma AB (publ)**

*Ortoma AB develops surgical systems for the planning and positioning of implants in hip, knee and spinal surgery. The purpose of the company's surgical system, Ortoma Treatment Solution™ (OTS) is to enable surgeons to accurately measure and plan 3D surgery for the placement of joint implants, and during surgery, to optimally position the implant in the patient. Ortoma's surgical system is aimed at providing better patient outcomes, fewer complications and less follow-up surgeries – and thus better long-term survival rates for implants. OTS is a system that is easily integrated into the processes and routines currently used in surgery, thereby increasing efficiency. Globally, more than 7.5 million orthopedic procedures are performed each year where OTS could be used in hip, knee and spinal surgery. In Sweden, around 42,000 surgical procedures were performed last year, involving hip, knee or spinal surgery. Ortoma's B shares are listed on Spotlight Stock Market.*
